Senior Software Engineer with 10+ years of experience designing and building scalable Python backend systems, APIs and distributed architectures for startups and product companies. Experienced in cloud platforms, async processing, ETL pipelines and data-intensive applications, with a strong background in healthcare, distributed systems and AI-driven products handling large-scale datasets. Experienced in greenfield development, architectural decisions and building production systems from the ground up.

Skills and experience

- **Backend Engineering:** Python, FastAPI, Flask, SQLAlchemy, REST APIs, Celery.
- **Architecture & Practices:** Microservices, Event-driven systems, async processing, DDD, TDD, CI/CD.
- **Data Platforms & ETL:** PostgreSQL, MongoDB, Redis, Dagster, CockroachDB, ClickHouse, Influx.
- **Cloud & Infrastructure:** AWS, GCP, Azure, Docker, Linux, GitHub Actions, Jenkins.
- **Security & APIs:** OAuth2, JWT, authentication, integrations, OpenAPI, API design.

Education

- **MSc in Advanced Information Technology.** | *University of Huelva.* | 2009.
- **BEng in Computer Science Engineering.** | *University of Huelva.* | 2007.

Career History

• British Airways.

Senior Backend Engineer | Remote | May 2025 – May 2026.

Global airline operating large-scale optimisation and decision-support systems.

- Designed and developed backend services and internal tooling supporting airline operations.
- Built async workflows, integrations and ETL pipelines in Python.
- Collaborated with AI and data teams on scheduling and optimisation platforms processing large volumes of operational data.

• Idovent 1903 SL.

Senior Backend Engineer | Remote | Nov 2021 – May 2024.

AI-powered cardiology platform processing large-scale ECG datasets.

- Designed and developed backend services and APIs supporting ECG processing and healthcare data platforms.
- Worked on scalable data pipelines and distributed systems for AI-assisted cardiology tools.
- Contributed to cloud-based services handling one of the world's largest ECG datasets.

• Kado Networks.

Lead Backend Engineer | Remote | Dec 2020 – Nov 2021.

Greenfield digital networking platform based on contactless technologies.

- Led backend development from initial architecture to production deployment.
- Designed APIs and scalable backend services for professional connection management.
- Worked on authentication, integrations and cloud-based architectures.

- **Xfera CF.**

Lead Backend Engineer | Remote | Feb 2020 – Jan 2021.

Greenfield fintech platform focused on consumer lending products.

- Led backend development from initial architecture to production deployment.
- Designed APIs and backend systems for integrations with banking and payment services.
- Worked on secure authentication and scalable service architectures.

- **Savana Medica.**

Senior Backend Engineer | Madrid | Feb 2019 – Jan 2020.

Healthcare AI platform specialised in clinical data analysis and medical research.

- Developed backend systems and APIs for medical data processing platforms.
- Worked with one of the world's largest collections of clinical documents, building ETL pipelines and distributed processing systems.
- Collaborated on scalable architectures for AI-driven healthcare solutions.

- **StyleSage.**

Senior Backend Engineer | Madrid | Nov 2017 – Feb 2019.

StyleSage develops AI-powered retail analytics and pricing intelligence platforms.

- Developed backend services and data processing systems for AI-powered retail analytics.
- Worked on scalable data pipelines and cloud-based architectures.
- Contributed to distributed systems handling real-time retail and pricing information.

- **Jinn.**

Backend Engineer | London | Jun 2016 – Sep 2017.

Jinn was an on-demand delivery platform connecting users with local businesses.

- Developed backend services and APIs for real-time delivery operations.
- Worked on scalable systems supporting logistics and order management.
- Collaborated on cloud-based microservices architectures.

- **Novastone Media.**

Backend Engineer | London | Jan 2015 – May 2016.

Novastone develops secure mobile-centric platforms for financial services companies.

- Developed backend systems and APIs for financial communication platforms.
- Worked on secure and scalable cloud-based architectures.
- Collaborated on integrations and mobile-oriented backend services.

Personal Projects

- **Proyecto Zero.** Lead Backend. Open-source personal finance platform focused on expense tracking and financial management. Python, Django.
- **AsGeRe: Assistant for Biomedical Text Summarization.** Bachelor's Final Degree Project. Developed a desktop application for biomedical text extraction and summarization, supporting the creation of gold-standard NLP datasets through information extraction from scientific literature.
- **Raspberry Pi 4 model B.** Self-hosted infrastructure and homelab environment including NAS, Git, Jenkins, TeslaMate, media and automation services.
